Appendix E. Southwest Regional Spaceport Site Characteristics

The following table represents the complete inventory of sites found by during the Class III survey at SRS. The table's column headings identify each site by the following information:

- *LA No.* refers to the Laboratory of Anthropology registration number. This is a unique number recorded at the Laboratory of Anthropology, Museum of New Mexico in Santa Fe, New Mexico, for each site. HSR (Human Systems Research) site number refers to the field project number related to a site recorded by the archaeology consultant, Human Systems Research.
- *Cultural Affiliation* is the identity of the cultural group(s) associated with the site.
- *Temporal Affiliation* is the time range associated with the site.
- *Site Type* refers to the artifacts and features found at the site.
- *Size* is the estimated size of the site in hectares.
- *Site Depth* is the estimated depth in centimeters to which artifacts and features may be found.
- *Research Topics* refers to selected research themes and types of studies that would contribute to knowledge of the prehistory and history of the region. These topics are used to evaluate a site's potential eligibility to the National Register of Historic Places. These studies would result in a better understanding of how prehistoric and historic peoples adapted to a changing environment through studies of artifacts and features found at each site.
- *Land owner* identifies the current land-use manager.
- *Action* is the type of action that would be taken by SRS when encountering a site.
